WEAPON CARRIER SYSTEM

TA01072

*Image is for illustration purposes only

PRODUCT DESCRIPTION

The system is designed to provide a stable and accurate aiming platform for both close-up and standoff firing. It includes the following parts:

Interface Frame - couples with quick fit-release plate and features aluminum Terminal Box for electrical interface via Milspec connectors with the RCV and integral wiring loom for the Laser Sights. Includes machined aluminum frame with stainless steel screw in-out locking pins, dowels, and locking dowel to fit the Remotec quick-fit mounting plate.

Mounting Block – consists of one-piece machined aluminum block featuring two disruptor ports and four integral zeroable Laser Sights (one pair for each disruptor). Laser Sights may be specified as either 2.8 mW 635nm Red or 50 mW 532nm Green. The latter are fully effective in bright sunlight at 30 meters and beyond. The Laser Sights feature zeroing adjustment via contra-rotating prisms which make zeroing easy and are more stable than adjusting screws.

Mounting Block - is hinged to permit over-and-under or side-by-side configuration for low angle shooting.

Shotgun Adapter Frame – consists of machined aluminum mounting plate, pylons and side plates. Features two integral zeroable Laser Sights: the 2.8 mW 635nm Red or 50 mW 532nm Green. The latter are fully effective in bright sunlight at 30 meters and beyond.

Shotgun Adapter Frame - designed to carry the Benelli M4 Super 90 gas operated military shotgun.

Shotgun Remote Firing Module – consists of solenoid set, trigger connecting assembly, machined aluminum housing, and heavy duty connecting terminals.
