## SPIKE ROAD BLOCK

TA03082

### PRODUCT DESCRIPTION

The Spiked Road Block is a new, updated polymer roadblock. Thanks to the durable properties of its polymeric material, there is no chance of it being bent or broken - even in the roughest operational conditions. The Road Block maintains stability without the need for an external stabilizer. Its uniquely shaped hollow spikes remain embedded in tires deflating them in just 5 seconds. It features a smart self-release mechanism for each spike so that spikes cannot detach themselves from the barrier in almost any condition. Its simple spike replacement technique allows the Spiked Road Block to be operational within minutes of last being used. The product's new version offers the option of remote folding using a rope, thereby minimizing the time security personnel are exposed to potential danger.
