## PRODUCT DESCRIPTION

The Ultimate Victim Location System is a state of the art technical search and rescue device designed to quickly and accurately pinpoint the location of victims of structural collapse and similar confined space rescue situations. It combines a high resolution color video camera, sensitive search microphone, speaker, and light source into a fully articulating, remote controlled, telescoping probe. On-screen system status graphics insure that the operator can monitor the system without diverting either sight or attention from the search task. The life locator includes a telescopic boom with an infrared camera, able to turn through 360, fixed to the end and connected to a portable control box with a screen. The Life Locator LifeCam allows rescue teams to search the area of a natural disaster or other type of emergency event and communicate with a victim via the microphone integrated in the camera.
