PRODUCT DESCRIPTION

Wherever you are, moving or stationary, COBRA can see all around you. This unique robo-copter assures stabilized real-time aerial surveillance with the best size-to-endurance ratio in the market. Its compact size allows the COBRA to be deployed within seconds to a height of up to 25m, relaying data to the operator with no time limitations, even with an active signal jammer trying to prevent its operation and no GPS coverage.

The COBRA's size also makes it suitable for a wide range of vehicles. It can be employed for a variety of applications including: border surveillance, maritime search-rescue, convoy protection, real-time event coverage.

A delivery of robo-copters has already been made to the Italian Army and will shortly begin operational evaluation in Afghanistan.
