PRODUCT DESCRIPTION

This palm-sized marvel is a multi-purpose, focused beam instrument that can be used as a hand-held, head-mounted, or table-mounted forensic light source. Its Amalgam light source produces an excitation band at the frequency of 470nm—ideal for locating many forms of physical evidence. The six full powered LEDs are incredibly energy efficient due to a regulated power supply producing a constant light output. An electronic micro-switch provides seven operational modes: High, Medium and Low Power Brightness; Fast, Medium and Slow Strobe Effect, and Auto Shutoff. A power monitor monitors remaining battery life and automatically shuts off when switches are held longer than 30 seconds. When maximum illumination is required, the Hyper-Glo switch provides the ultimate level of brightness—ideal for evidence photography. An electronic memory circuit recalls the last setting. It operates on only three AA batteries of type: Alkaline, Nickel Cadmium, Nickel Metal Hydride or Lithium, allowing universal utility.
