FIELD CONTAINER MORQUE FCM

The FCM is a cooling two-chamber container identical in size to the ISO 1C. It's designed for hygienic storage of up to 14 dead bodies or their remains in sanitary bags or solid coffins. The device contains a machine part with built-in cooling technology and two separate insulated chilled / frozen storage chambers the first of which contains seven beds in a rack system. The second has free space where up to seven bodies can be placed into temporary mounted beds. The space can also be used for storing medical or other types of material requiring chilling or refrigeration. Both chambers have independently adjustable cooling or freezing mode. Combined power units ensure autonomous operation of the cooling container loading/ unloading to the upper floors of the rack system in the cooling section chambers.
