Equipment and Training

## PORTABLE BLAST CONTAINER

TA01008

### PRODUCT DESCRIPTION

The blast container is designed to protect property and personnel from IED blasts and fragmentation following one. It's able to withstand blasts of up to 500g in a letter bomb device and manufactured from a ballistic fiberglass tube with a gelcoat finish. The removable inner bag is made from a fire retardant plastic with venting to keep it in place should a device be activated inside the container and for conducting an X-ray to inspect the contents of a package. The bag's handle loops allow easy removal of the package for further inspection at a safe location.
