## HEAVY DUTY TRIPOD

TA01051

### PRODUCT DESCRIPTION

The Heavy Duty Tripod is designed to enable bomb disposal technicians to remotely lift suspicious items that appear like a improvised explosive device (IED) weighing up to 750 kg from places like car boots, drainage holes, etc. The three-section telescopic legs of the EOD Tripod can be adjusted for the necessary height, enabling the device to be placed on both flat and sloping surfaces and locked into position. The flat, self-levelling foot of each leg is protected from damage caused by movement on a hard surface with the help of sandbags or, on soft ground, be pegged into the ground with the spikes provided in the product package.

The top of the tripod is fitted with a triple block, or pulley, with bearings for easy lifting of heavy objects. A rope with a karabiner at one end is affixed to it. A lifting tackle is attached to the karabiner allowing the operator to lift the suspicious object. The rope runs from the karabiner through the pulley at the top of the tripod and down to the base of one of the legs where another triple block with a jammer is fitted. This ensures that the tripod does not tip over when lifting the object.
